

Hospital Asset Tracking using RFID

Keeping track of the assets and equipment in healthcare industry is critically important. Hospital assets are not only expensive items – if they are not in the right place at the right time, it can lead to loss of life.

Our RFID tags have been designed and developed keeping in mind the specific demands of healthcare industry. Our hard tags can easily sustain the chemical cleaning in hospitals and pharma industry.

RFID in healthcare management provides real-time visibility and control over assets, patients, and supplies through automated tracking. The healthcare asset tagging system automatically identifies and tracks the RFID tags that are attached to assets and equipment.

Benefits of using RFID for healthcare management

- Reduce loss or theft of high value assets, organize asset and equipment and keep records.
- Operational efficiency in providing timely and quality healthcare.
- Increase efficiency by eliminating time-consuming manual inventories.
- Our rugged RFID tags can be sustain even the corrosive cleaning chemicals used in healthcare industry.
- Patient safety initiatives benefit from RFID by reducing identification errors and improving care quality.

Applications:

- Asset management
- Hospital tools tracking
- Patient Tracking

Suitable Tags:

Brick-M		55*22*9mm	Suitable for all metallic assets. Corrosive chemical resistant.
Sticky		105*26mm (custom size available)	Suitable for all non metallic assets
ERGO		60*25*1.2mm	Suitable for all IT assets
